

# MAGNET WIRE SPLICEBAND

USING MAGNET-PIERCING SPLICEBAND,  
THE SPLICE SYSTEM WILL PRODUCE  
A CONNECTION OF AN UNSTRIPPED  
MAGNET WIRE DIRECTLY TO WIRE OR  
COMPONENT

## KEY FEATURES

Spliceband for magnet wire (M-Spliceband) provides a cost effective and reliable method for connecting wires to electric motors, transformers, speakers, coils, alternators, solenoids, inductors and small appliances.

M-Spliceband uses a proprietary serrated profile, penetrating the various varnishes and coatings used on copper and aluminum magnet wire, producing a strong, reliable gas-tight interconnection between wires.

Multiple wires can be spliced simultaneously, with no pre-stripping required. Supported by a variety of tool sets, M-Spliceband enables high productivity splicing connections with no wasted material.

Vibration resistant and highly reliable, M-Spliceband from Autossplice has been an industry favorite for its quality and value.
